Groopit AI for IT Implementations

De-risk implementation and accelerate time to value by surfacing what systems don't know

Successful IT implementations are essential, but they're also high-risk, high-complexity initiatives that span departments, processes, and systems. Underlying issues can quietly derail even the best-laid plans.

To stay on track, companies rely on data from project plans, ticketing systems, and dashboards. But the most valuable source of insight is often missing: what employees know.

Employees see the real barriers to implementation every day. They know what's happening long before those issues show up in a system. They hold the earliest, most accurate indicators of risk and opportunity, insights that reveal the "whys" behind problems and the "hows" to move forward.

Traditional methods like surveys and post-mortems surface that intelligence too late. Critical insights stay trapped in employees' minds, where they can't be acted on.

Leaders are forced to make decisions disconnected from what's actually happening on the frontlines. AI is widening that gap. Companies that fail to close it will fall behind, fast.

Groopit connects leadership to the frontline in real-time

Groopit turns employees into a network of human sensors, surfacing issues and progress across every team involved in implementations.

Leaders gain real-time visibility into emerging issues, the patterns they form, and how they intersect and compound across the rollout.

Key stakeholders continually see how they can contribute to success.

Everyone involved aligns around a shared mission, powered by AI.

It's unprecedented, real-time clarity that de-risks implementations and accelerates time to value.

Groopit equips everyone with clarity to act

Complex IT initiatives require human intelligence and AI to work together as a system, and Groopit delivers.

AI-powered Data Models define the precise intelligence employees share and AI processes to identify issues and progress in real-time.

Extractive AI streamlines high-quality intelligence gathering to a click.

Generative AI analyzes the collective intelligence, identifies patterns, and summarizes actionable insights in written reports.

Enterprise Connectors move intelligence to, from, and across enterprise systems for full visibility and utilization.

Groopit AI is the only human intelligence engine that enables real-time data input, output, and analysis across silos, while allowing companies to operate with total agility across systems.

Implementation is fast and easy

Groopit can be operational within one week. Integrations with Slack, Teams, Outlook, Salesforce, and SSO each require one 30-minute installation by your IT team. Connections to additional enterprise systems can be made through an API and Groopit experts will be dedicated to helping you every step of the way.

Real outcomes delivered

Groopit isn't just another tool. It aligns everyone from the frontline to the leadership team. It transforms a company's ability to de-risk implementations and accelerate time to value.
